SUMMARY

MERN Stack Developer with 4+ years of experience architecting and shipping high-performance web applications using MongoDB, Express.js, React.js, Node.js, Next.js, and TypeScript. Built real-time AI products powered by LLM/RAG integration and WebSocket streaming, alongside data-driven dashboards — including a 50%-page load reduction on an enterprise analytics platform. Led Agile teams of 5–6 engineers, mentored junior developers, and consistently shipped production-ready features end-to-end. Leverages AI-assisted tools like Claude and Cursor daily to accelerate development, improve code quality, and ship faster without compromising engineering rigor.

TECHNICAL SKILLS

Frontend: React.js, Next.js (SSR/SSG/ISR), TypeScript, JavaScript (ES6+), Redux, Context API, Tailwind CSS, SASS/SCSS, Material UI, Responsive Design, SEO Optimization

Backend: Node.js, NestJs, Express.js, RESTful APIs, JWT Authentication, OAuth, WebSocket, Socket.io, Microservices

Database: MongoDB, Mongoose, NoSQL, Aggregation Pipeline, MongoDB Atlas, Data Modeling

DevOps & Tools: Git, GitHub, CI/CD, Docker, AWS (EC2, S3), Nginx, Vercel, Jest, Webpack, Vite, Postman, Swagger

AI Tools: Cursor, Claude, ChatGPT, Perplexity

Methodologies: Agile, Scrum, JIRA, Code Review, TDD, REST API Integration, SOLID

PROFESSIONAL EXPERIENCE

Senior Software Engineer — In Time TecApr 2026 – Present

- Led and managed a team of **5–6 engineers** — conducted daily standups, sprint planning, progress tracking, and provided technical guidance to keep delivery on schedule.
- Established team-wide coding standards through structured weekly code reviews; mentored freshers on **MERN** stack best practices, **SOLID** principles, and codebase conventions.
- Defined frontend architecture, **SSR/SSG** strategy, routing patterns, and backend API design for a production-grade regional AI platform.

Software Engineer — In Time TecOct 2023 – Mar 2026

- Served as team lead on HP Pricing Analytics Tool within a **10+ member** Agile team — triaged bugs, reviewed PRs, coordinated with backend engineers, and ensured release stability.
- Facilitated Agile retrospectives, identified sprint bottlenecks, and introduced process improvements that reduced sprint carryover by ~20%.
- Mentored 3 junior developers through structured code reviews and best practices, reducing post-merge bugs significantly.

Junior Software Engineer — In Time TecFeb 2022 – Oct 2023

- Independently delivered **3–4 production features** per sprint — full ownership from requirements to deployment using **React.js, TypeScript, Redux, Node.js, and Express.js**.
- Collaborated closely with senior engineers to integrate **REST APIs** and build data-driven dashboard views for enterprise decision-making.

KEY PROJECTS

AL-Jouf AI Platform | Next.js, React.js, Node.js, Express.js, MongoDB, TypeScript, LlamaIndex, RAG

- Architected full-stack application with direction-aware component library supporting Arabic RTL + English LTR (i18n) — zero rendering inconsistencies across locales.
- Integrated **LLM + RAG chatbot** with real-time WebSocket streaming UI achieving **sub-7s** response; applied SSR/SSG patterns and reusable TypeScript components, cutting future dev time by ~30%.
- Defined React component hierarchy, backend APIs and Headless Orchard Core CMS integration with best **SEO** techniques.

ASK ITT — Internal AI Chatbot | React.js, Next.js, Node.js, Express.js, MongoDB, Tailwind CSS, WebSocket, JWT

- Designed and implemented complete architecture from scratch — end-to-end ownership across **5+ modules** including system design, REST API integration, state management, JWT auth flows, and real-time WebSocket communication.
- Built full-stack chatbot serving **100+ daily users** with persistent conversation history in **PostgreSQL**, role-based access with JWT, and optimistic UI patterns achieving **sub-200ms** perceived response times.

HP Pricing Analytics Tool | React.js, TypeScript, Redux, Node.js, Express.js, MongoDB, Ag Grid, SASS

- Led performance overhaul using **React memoization, lazy loading, code splitting, and eliminating redundant useEffect chains** — reduced page load time by ~50% with zero backend changes.
- Built reusable Ag Grid dashboards with real-time **data visualization**, exportable reporting, and **REST API integrations** across a 10+ person enterprise team.

EDUCATION

M.Tech – AI & Machine Learning (WILP) | BITS Pilani | CGPA: 7.0/10Nov 2023 – Oct 2025

B.Tech – Computer Science | Jodhpur Institute of Engineering & Technology | CGPA: 9.0/10Aug 2018 – Jul 2022
